

# 2027 Texas Freight Mobility Plan Overview

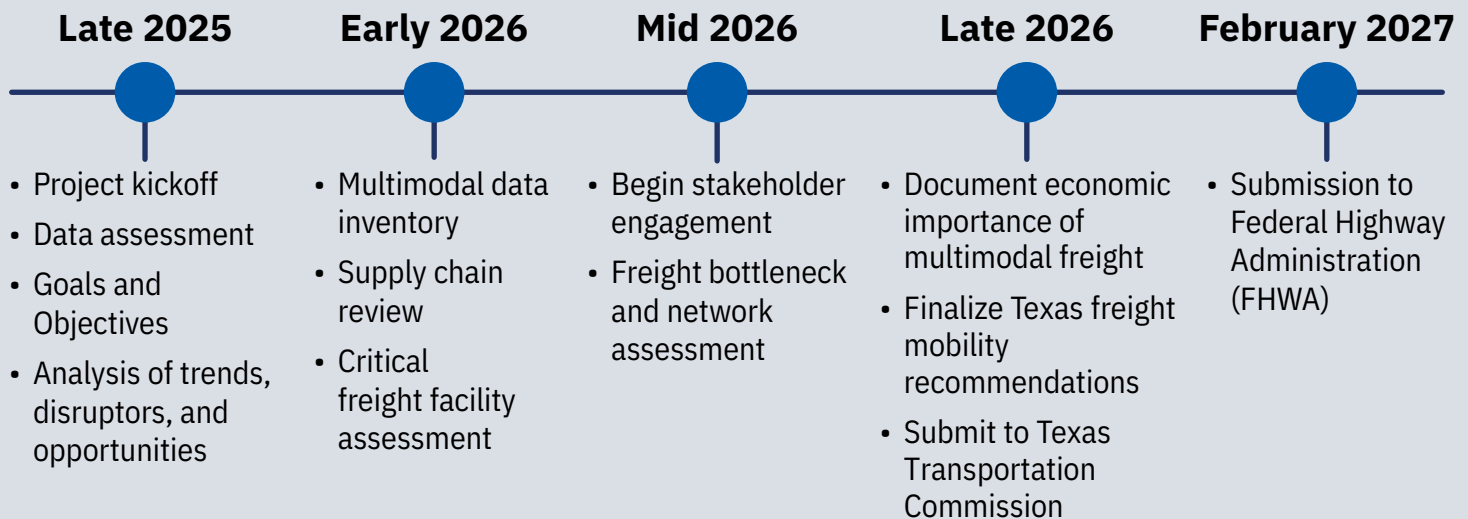

The 2027 Texas Freight Mobility Plan (TFMP) will detail Texas freight transportation assets, conditions, current and future needs, and economic importance through the lens of critical supply chains including broader findings related to freight operations and international trade.

The TFMP will provide recommendations and strategies including policies, programs, and projects for Texas Department of Transportation (TxDOT) to advance over the next four years and beyond.

## TFMP Timeline

# 2027 Texas Freight Mobility Plan

## Goals and Objectives

### GOAL 1: Move Texas Freight Safely

*Plan, build, and maintain a safe and secure freight system for all users.*

**Objective:** Reduce freight-related crashes and eliminate fatalities and injuries through rapid incident response, safer rail crossings, innovative technology, and industry partnerships.

### GOAL 2: Prioritize the Most Impactful Investments

*Identify, prioritize, and implement investments within the Unified Transportation Program (UTP) that offer greatest value to the multimodal freight network, economy, and Texas communities.*

**Objective:** Deliver high-value freight investments that improve mobility and reliability, Texas' competitiveness, and expand access to freight jobs, services, and activity centers.

### GOAL 3: Optimize Freight System Performance

*Implement a freight system that leverages innovation to improve intermodal connectivity, reduce congestion, and enhance network performance.*

**Objective:** Reduce delays, strengthen intermodal connectivity and first- and last-mile connections, improve reliability at freight hubs, and enhance efficiency through partnerships and traffic management strategies.

### GOAL 4: Reinforce Security on the Freight Network

*Design a system that is resilient and secure against physical, digital, and operational threats to goods movement, infrastructure, and supply chains.*

**Objective:** Protect critical freight corridors and facilities and strengthen security coordination and emergency preparedness and response using advanced technologies.

### GOAL 5: Deliver an Adaptive Freight Network

*Deliver an adaptive freight network that withstands disruptions and responds to evolving economic, environmental, and technological conditions.*

**Objective:** Strengthen supply chains, improve reliability, expand routing options, and preserve infrastructure to maintain system performance during disruptions.

### GOAL 6: Promote Responsible Stewardship of Resources

*Advance a freight system that continues the responsible and efficient use of fiscal and natural resources while supporting efficient goods movement.*

**Objective:** Advance sustainable funding and partnerships, accelerate project delivery, support positive impact freight solutions, and leverage emerging fuel technologies.
